

# Pediatric Residency Program

## NewYork-Presbyterian/Weill Cornell Medical Center

Full program information at: [pediatrics.weill.cornell.edu/residency-program](https://pediatrics.weill.cornell.edu/residency-program)

Our three-year residency program is designed to provide the trainee with the basic tools for the practice of general pediatrics, with increasing levels of autonomy and responsibility. Our mission is to provide a supportive and educationally rich environment through which our residents can develop into outstanding pediatricians equipped with the skills to enter general pediatrics or fellowships in pediatric sub-specialties.

### A Strong Foundation

All of our residents spend one half-day per week participating in the Resident Group Practice where they follow a cohort of patients longitudinally through all aspects of sick and well patient care. In addition, our residents spend part of their time in ambulatory-based sub-specialty specific rotations. This is in conjunction with a variety of inpatient experiences that allow residents to further develop their clinical skills. The faculty includes pediatric hospitalists, ambulatory pediatricians, and an impressive array of pediatric subspecialists and pediatric subspecialty surgeons.

### Program Highlights

- **Residency and Research:** We are committed to providing residents with a basic foundation in research methodology and to ensuring that they have the administrative and faculty support to develop, carry out, and present a research project successfully. The department supports residents in their projects through mentorship, statistical support, and financial to present their research at regional or national conferences.
- **Community Pediatrics & Child Advocacy:** Residents have the opportunity to work in the community and to develop and implement advocacy skills. All pediatric residents participate in a longitudinal curriculum in community pediatrics and child advocacy during their second year. If a resident has a particular interest in community pediatrics and child advocacy, they can take part in selective or elective opportunities as part of their individualized learning plan.
- **Resident as Teacher Curriculum:** Our resident-as-teacher curriculum begins in orientation for interns and continues throughout the three years of training to prepare our residents to be educators, either of patients/families or of learners in their future careers in academic medicine.
- **Diversity and Inclusion:** The Department of Pediatrics seeks to foster working and educational environments where all persons can succeed, thrive, and find community, irrespective of race, ethnicity, gender, age or any other domain of identity. For housestaff, the **Pediatric Minority Housestaff Committee (PMHC)** was established in 2017 in an effort to provide a forum for residents and fellows traditionally underrepresented in pediatrics to gather, share ideas and build community. The PMHC is comprised of members of the pediatric housestaff (both residents and fellows) and dedicated faculty advisors.

**NewYork-Presbyterian/Weill Cornell Physician Scientist Training Program:** Interns entering the NewYork-Presbyterian/Weill Cornell Physician Scientist Training Program in June 2022 will follow the Integrated Research Pathway (IRP) defined by the American Board of Pediatrics. The goal of the NewYork-Presbyterian & Weill Cornell Medicine Pediatric IRP is to identify and train the next generation of pediatric physician-scientists as leaders in the development and implementation of innovative strategies to improve the health of children. The program is dedicated to preparing pediatric residents to become the next generation of physician-scientists in academic medicine and will be administered in coordination with the pre-existing NewYork-Presbyterian/Columbia University Pediatrics Physician Scientist Training Program (PSTP).

### Supporting Resident Wellness and Self-Care

We incorporate a series of wellness days throughout the year focusing on topics related to wellness and balance including stress reduction, personal finance management, healthy eating and fitness, relationship management, sleep hygiene, and coping with pediatric deaths and patients with chronic conditions. Additional support is provided through tailored support groups, peer-to-peer mentoring, and social events.

### How to Apply

We participate in the National Residency Match Program and in the ERAS application system. Only applications submitted through ERAS will be reviewed. **Our deadline is November 1.** All materials should be submitted to ERAS by this date of the year prior to which for you are matching. For details, please visit our website at <https://pediatrics.weill.cornell.edu/residency/applying-program>

# Pediatric Residency Program

## NewYork-Presbyterian Morgan Stanley Children's Hospital

Full program information at: [pediatrics.columbia.edu/education/pediatric-residency](https://www.pediatrics.columbia.edu/education/pediatric-residency)

### Training exceptional pediatricians with diverse backgrounds to become leaders in care and advocacy for children

The pediatric residency program at NewYork-Presbyterian Morgan Stanley Children's Hospital and NewYork-Presbyterian/Columbia University Irving Medical Center (CUIMC) provides our trainees with an exceptional foundation in pediatrics and enables them to pursue diverse and enriching experiences in research, advocacy, community pediatrics, and global health.

### Curriculum and Scholarly Work

Trainees complete our program confident in their abilities and are well prepared to enter practice or to undertake further postgraduate training. The knowledge and skills our residents gain, and the mentorship they are afforded by our dedicated faculty, provide for a rich and comprehensive training experience, and we are committed to helping you achieve your goals and to realize your potential.

At NewYork-Presbyterian Morgan Stanley, our clinical services encompass all medical and surgical specialties including neonatology, critical care, cardiology, oncology, and transplantation, and NewYork-Presbyterian Morgan Stanley ranks in more pediatric specialties than any other hospital in the metropolitan New York area, according to the 2020-2021 U.S. News & World Report Best Children's Hospitals rankings.

### Community Pediatrics Training Program

We have a robust Community Pediatrics Program, a model of joint academic-community partnerships that serves the children in our local community of Washington Heights, and our residents provide care at four neighborhood-based practice sites as a part of their training.

### Diversity and Inclusion

Similar to our faculty and our city, our residents are a remarkably diverse group in terms of interests, background, and passion, but all share two things: a fervent desire to serve children and the potential to be leaders in their fields. The Pediatric Diversity and Inclusion Council (PDIC) was founded in 2013 and is open to all residents, fellows, faculty, and healthcare team members. The PDIC has broadened the department's focus from recruiting a diverse housestaff to providing structured diversity and inclusion programming as core elements of our pediatrics residency training experience.

### Pediatrician Scientist Training and Development Program (PSTDP)

Through the PSTDP the Department of Pediatrics aims to recruit talented MDs or MD/PhDs committed to careers in research and pediatrics and to provide a comprehensive, personalized approach that supports participants' long term success.

The mission of our hospital has not changed in 120 years: to provide extraordinary patient care, educate our young colleagues in a mentoring environment, and perform innovative research that will make a difference in the lives of children and adolescents. If you share our commitment to leadership and advocacy for children learn more about residency training at CUIMC and NewYork-Presbyterian Morgan Stanley Children's Hospital at <https://www.pediatrics.columbia.edu/education/pediatric-residency>.
