

# Less paperwork. *More patient work.*

Ever feel like your day is dedicated to paperwork? You're not alone. Modern day caregivers are spending more time with computers than with patients. Data entry steals 2/3 of the average physician's day. Thanks to the benefits of PediNotes, we have crafted a neonatal EMR that enhances your current EMR to help you take that time back.

With data that pulls from all sources, and takes less clicks to find, you'll be able to work with greater efficiency than ever before. And that means becoming a better physician for your patients.

- **Time Saved Across The Board.**
  - From rounding to obtaining lab results to Vermont Oxford input, PediNotes simplifies your workflow.
- **Interoperability and Independence.**
  - PediNotes operates in tandem with existing hospital systems, yet it can also run as a standalone application.
- **Seamless Data Access.**
  - Caregivers can collect, access, and export patient data with a single software platform.

Join me and all the other PAS innovators in an effort to free our doctors and get back time we lost. Share with your CIO and try a free demo today.
